

SamuSignal Pro — Setup Guide

Poori jaankari: API key, Telegram bot, aur har feature ka use. Ye guide Hinglish me hai. App ki language English hai.

1. Shuruaat — 5 minute

App khulne ke baad sabse pehle sirf ek cheez chahiye: **TwelveData API key**. Uske bina prices nahi aayenge.

- 1 App khologe to 7 din ka free trial apne aap chalu ho jayega. Header me kitne din bache hain wo dikhta rahega.
- 2 **SETTINGS** daba kar **Market Data (TwelveData)** section me apni API key paste karo (agla section dekho).
- 3 **SAVE** dabao. Header me "API connected" aa jayega.
- 4 Signals page pe pair chuno, timeframe chuno, aur **ANALYZE** dabao.

2. TwelveData API Key kaise banaye

Ye key market ka live price aur candles laati hai. Free plan roz **800 credits** deta hai — normal use ke liye kaafi hai.

- 1 Browser me **twelvedata.com** kholo.
- 2 **Sign Up** dabao. Email aur password se free account banao.
- 3 Email verify karo (inbox me link aayega).
- 4 Login karke **Dashboard** me jao. Left side me **API Keys** milega.
- 5 Wahan ek key already bani hui hogi. Uske aage **copy** ka icon dabao.
- 6 App me **SETTINGS > Market Data** me paste karo, phir **SAVE**.

Credits kaise kharch hote hain: ek Analyze = 1 se 3 credits (timeframe pe depend). Scan me har pair ka 1 credit. Chart tracking me har check ka 1 credit. Settings me daily cap 700 rakha hai taaki buffer bacha rahe.

Dhyan do: free plan pe metals (XAUUSD) aur kuch exotic pairs band hote hain. Aisa pair "locked" dikhega. Major pairs (EURUSD, GBPUSD, USDJPY) hamesha chalte hain.

3. Google Gemini API Key (marzi se)

Gemini do kaam karta hai: signal ko aasan bhasha me samjhata hai, aur **chart screenshot padhta hai**. Iske bina baaki app chalti hai, bas ye do feature band rehte hain.

- 1 **aistudio.google.com** kholo aur Google account se login karo.
- 2 Left menu me **Get API key** dabao.
- 3 **Create API key** dabao. Naya project bana lo agar poochhe.
- 4 Key copy karo.
- 5 App me SETTINGS > AI Analysis (Gemini) me paste karo, phir SAVE.
- 6 **SHOW MODELS** dabakar check kar lo ki key kaam kar rahi hai.

4. Telegram Alerts (marzi se)

Isse har signal aur trade close tumhare Telegram pe aa jayega. Do cheezein chahiye: **bot token** aur **chat ID**.

Bot Token

- 1 Telegram me **@BotFather** search karo aur chat kholo.
- 2 **/newbot** bhejo.
- 3 Bot ka naam do (kuch bhi), phir username do — jo **bot** pe khatam ho, jaise *samu_alerts_bot*.
- 4 BotFather ek lambi token dega. Use copy karo.

Chat ID

- 1 Apne naye bot ko Telegram me kholo aur **Start** dabao.
- 2 Usko koi bhi message bhejo, jaise "hi".
- 3 App me ALERTS page pe token paste karo, phir **SEND TEST** dabao.
- 4 Agar message aa gaya — ho gaya. Agar nahi aaya, Telegram me **@userinfobot** ko message karo, wo tumhari ID batayega. Use App me paste karo.

Bot ko pehle Start karna zaroori hai. Telegram bot ko pehla message bhejne nahi deta jab tak user usse baat shuru na kare.

5. App ke saare page

Page	Kya karta hai
SIGNALS	Pair aur timeframe chuno, Analyze dabao. Direction, quality score, entry/SL/TP, har indicator ki poori wajah, a
SCAN	Wahi engine poori watchlist pe chalata hai aur best setup upar dikhata hai. Har pair ka 1 credit. Result 5 minu
VOTES	50 agents ne kya vote diya aur unka live win rate. Backtest tab purane candles pe chalakar batata hai kaunsa
MARKET	Currency, metals, indices aur crypto ka live rate table.
TRADES	Tumhara journal. Liye hue trade record karo, live P&L dekho, SL/TP badlo, win rate aur breakeven ka hisaab
ALERTS	Telegram setup, chart screenshot analysis, live tracking, aur backup tools.

6. Chart Screenshot Analysis

ALERTS page pe apne chart ka screenshot upload karo. Gemini usko padhkar poora analysis deta hai.

- **Trading style** pehle chuno — Scalping, Day ya Swing. Isse SL/TP ki chaudai badalti hai.
- Screenshot saaf ho: **price axis** aur **pair ka naam** dono dikhne chahiye.
- Result me milta hai: BUY/SELL, Entry, SL, TP1, TP2, confidence %, trend, support/resistance, reasoning, invalidation level, aur counter-trade.
- **TRACK THIS SETUP** dabaoge to app us pair ka live price dekhti rahegi aur entry, SL, TP pe alert degi.

*Zaroori: levels screenshot se **padhe** jaate hain, live data se nahi. Trade lene se pehle current price se milaakar dekho. Tracking sirf tab chalti hai jab app khuli ho — phone background me app ko jaga nahi sakta.*

7. Risk aur TP/SL settings

Do tarike hain SL/TP nikalne ke:

- **Fixed dollar** — har pair pe wahi dollar amount. Simple, par gold jaisi volatile cheez pe SL bahut paas lag jaati hai.
- **ATR based** — market ki asli chaal ke hisaab se SL. Gold pe chaudi, EURUSD pe patli. Iske saath "Auto lot" on karoge to risk dollar me fix rahega aur lot khud adjust hoga.

TP/SL ki value **0.01 lot** ke hisaab se hoti hai. Lot badhaoge to dollar apne aap badh jayega, par price distance wahi rahegi.

Gold, US30 aur BTC ke apne alag default hain, kyunki global \$1/\$2.50 unpe kaam nahi karta. Per-Pair Settings me inhe badal sakte ho.

8. Trial, Licence aur Restore

- App install karte hi **7 din ka free trial** chalu ho jaata hai. Header me bache hue din dikhte rehte hain.
- Trial khatam hone pe app lock ho jaati hai, **par tumhara data safe rehta hai** — trades aur history delete nahi hote.
- Unlock karne pe tumhe ek **restore code** milega. Use sambhal ke rakho.
- Naya phone liya ya app dobara install ki? Lock screen pe restore code daalo, licence wapas aa jayegi. **3 device** tak chalega.
- Restore code Licence sheet me hamesha dikhta rehta hai (header me tap karo).

9. Problem aaye to

Problem	Ilaaj
"Set your API key"	TwelveData key nahi hai ya save nahi hui. Dobara paste karke SAVE dabao.
Pair "locked" dikh raha	Wo instrument tumhare TwelveData plan me nahi hai. Major pair use karo, ya plan upgrade karke
"Out of credits"	Din ke 800 credits khatam. 00:00 UTC pe reset honge. Watchlist chhoti karo ya auto-refresh dheere
AI jawab nahi de raha	SHOW MODELS se Gemini key check karo. Quota khatam ho to agle din reset hoga.
Telegram test fail	Pehle apne bot ko kholkar Start dabao. Phir @userinfobot se chat ID confirm karo.
Chart "unreadable"	Screenshot dobara lo — price axis aur pair ka naam dono saaf dikhne chahiye.
Tracking ruk gayi	Tracking sirf app khuli hone pe chalti hai. App kholo aur CHECK NOW dabao.

10. Zaroori Chetavni

SamuSignal Pro ek analysis aur journal tool hai. Ye financial advice nahi hai. Jo signals, scores, agent votes, backtest aur AI commentary ye deta hai, wo technical indicators se bante hain aur sirf jaankari ke liye hain — kisi cheez ko khareedne ya bechne ki salaah nahi.

Forex, gold, indices aur crypto me margin pe trading me bahut risk hai aur tumhara jama kiya hua paisa se zyada ka nuksaan ho sakta hai. Purana performance — is app ka backtest bhi — future ka vaada nahi

karta. Ye app kisi broker se juda hua nahi hai aur asli order nahi laga sakta. Har trade tumhara apna faisla hai aur uski zimmedari tumhari hai. Shak ho to licensed financial advisor se baat karo.
